

12" Album Flower Block

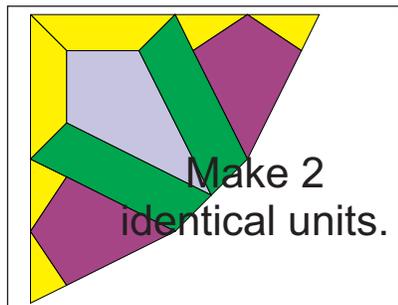

Assembly Instructions Patricia Russell 2010©

Buy the best quality fabric your budget can afford. Wash and iron fabrics before cutting. You need to shrink the fabrics and release any excess dyes and chemicals the manufacturer has added before using in your project. If you don't wash and your fabrics shrink or bleed later after you've spent many hours, don't whine. Use pins (yellow flat flower head are great) if you don't pin then don't complain that your seams don't match. There are no quilt police so use good judgement. It is your project so it will be only as good as what you put into it. Happy Quilting!

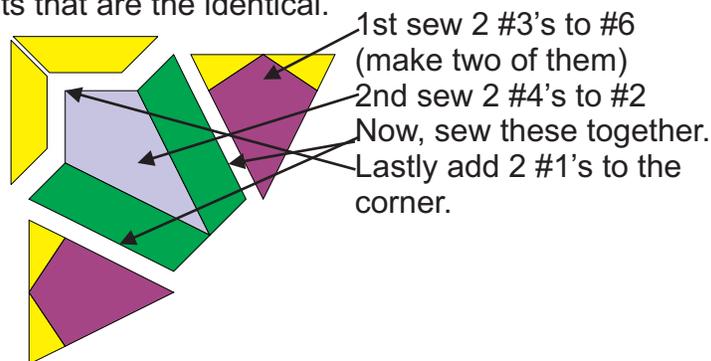

You have 6 templates, each has a 9mm hole at all corners. After you cut out your patches, mark these holes (dots) on the back on each patch. Instructions will refer to sewing dot-to-dot. You have 2 patches #3 & 4 look at the diagram in the block before you cut them out note 1/2 of them will need to be cut from the right side of the template and the other half, need to be cut from the wrong side of the template. Or, make it easy by cutting two layers that are wrong sides facing.

Step 1 - Once you determine how many patches you need and cut them out, mark on the back of each the 1/4" dot at their intersections. You will be making 3 sub units, 2 are identical and the other is the center.

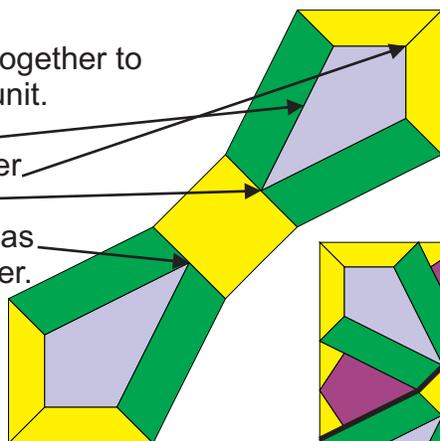

Step 2 - Sew patches together to create 2 units that are the identical.

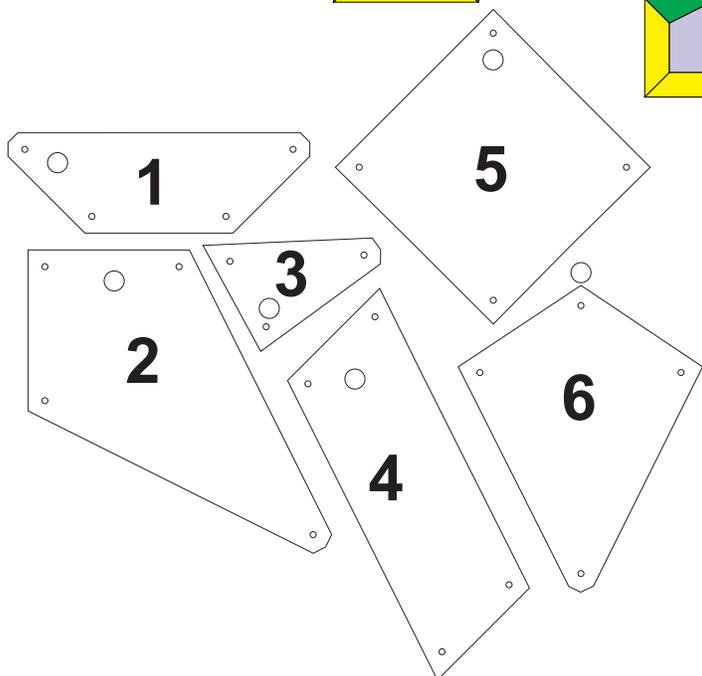

Step 3 - Sew patches together to create a single center unit.

1st sew 2 #4's to #2
2nd sew 2 #1's to corner
3rd sew this unit to #5
Repeat previous steps as before and sew to center.

Step 4 - Sew the three units together to create your block. (pin them so they do not move as you sew) Now, that wasn't so bad was it?

Follow with a press of the iron. Block should measure 12 1/2" square.

Please, visit our website:

Equiltsusa.com

We do custom laser cutting for your other block or template needs.
